

SYSTEM REQUIREMENT STUDY

3.1 STUDY OF CURRENT SYSTEM

The TaskTracker website for employee task management website idea comes from the following websites.

1. meistertask.com
2. bitrix24.com

I saw website meistertask.com . It not provide the facility for task progress bar and not provide the facility to see the progress of projects. Meistertask.com is not provide easy interface but my website tasktracker.com provide easy way for create project and create project task.

My website tasktracker.com provide progress bar for check the status of both project and task.

I also looked at the bitrix24.com in but it's process is difficult to create a project and create specific project task allocate task to employee but tasktracker.com website provide easy ui to perform this.

Bitrix24.com and meistretask.com is designed for every platform where required to manage task but the my website tasktracker.com website is designed for it company or organization. It manage only two module employee and administrator.

3.2 PROBLEMS AND WEAKNESS OF CURRENT SYSTEM

In the current system administrator create project and create task of project. After administrator allocate the task to single employee. But not change allocation detail after once task is allocated.

Communication system not available between organization and employee.

In this system can not allocate project directly to team or managers.
